

Risk and Safety Solutions: Inspect

RSS Inspect will allow Responsible Persons/Delegates and inspectors to communicate on one seamless platform. It provides a streamlined way to record issues, track resolutions, and analyze trends. Upload photos, view past inspections, mark incidents as resolved - all on RSS.

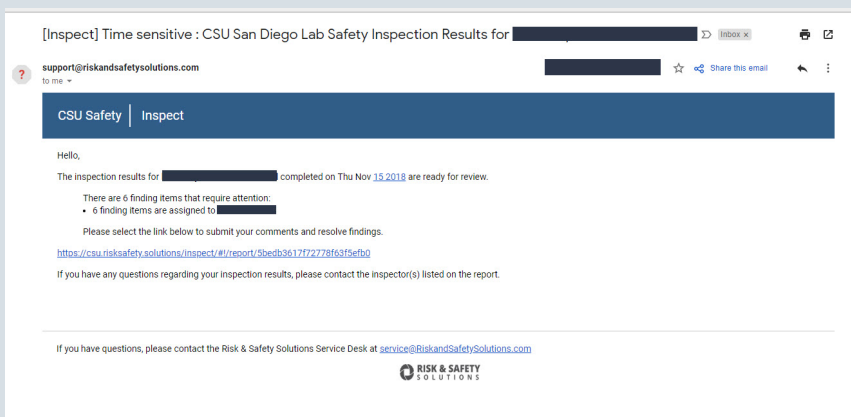

Why use RSS Inspect?

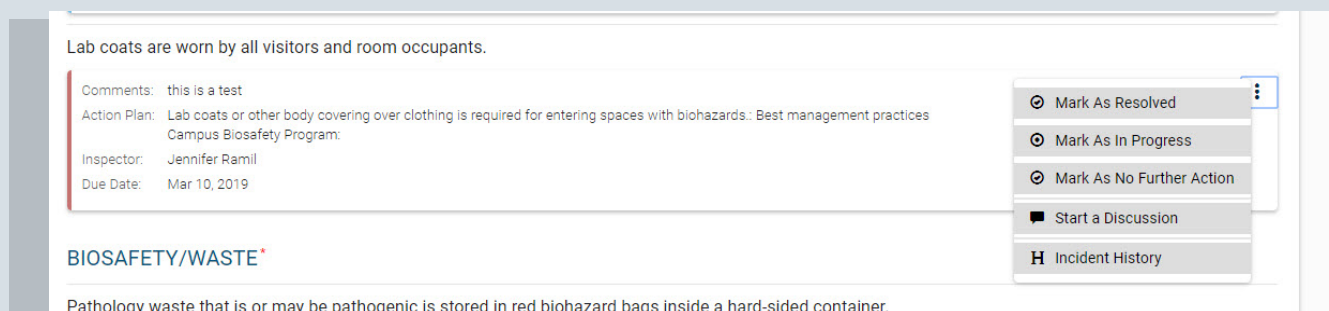

- ✓ Finally figure out what inspectors are looking for
- ✓ Prepare for your next inspection by viewing past inspection violations
- ✓ View your recent inspections, start a discussion, resolve non-compliance issues, or view the regulation

How RSS Inspect works

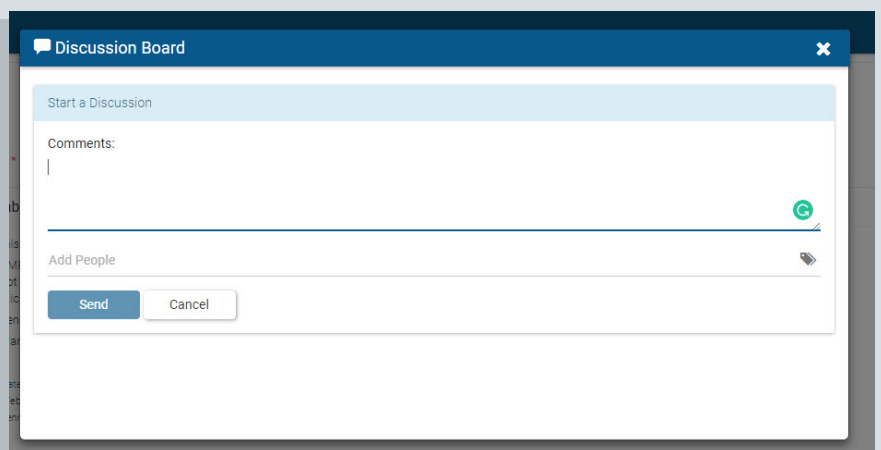

When an inspection is performed in your lab, the Responsible Person will receive an email allowing them to view the inspection results.

Violations are listed, along with comments or photos from the inspector. Mark the incident as resolved or start a discussion with the inspector

Ask for clarifications or tell your side of the story. View the history of a particular violation to see how it was handled in the past.
